## OTHER CHARACTERISTICS

A perfect synthesis between ergonomics and practicality, these chairs are blow-moulded using high density copolymer polypropylene, pastecoloured and enriched with UV-proof and antistatic substances and fire retardants.

Self-supporting and fitted with ribbing for extra strength, the chairs consist of separate seats and back with an embossed-effect surface thanks to photoengraving during moulding. Thanks to their modern ergonomic shape and thickness, these chairs are more comfortable than usual plastic seats and can even be fitted with fixed or tip-up armrests on request.

The tip-up seats make it easier for people to pass and involve or an automatic spring device, or they close thanks to gravity in the case of tip-up chairs with armrests.

In fact, the armrest have springs that always tip up automatically together with the seat. In the city and indoor stadiums, these chairs are normally fitted to risers of the terraces though steel frames or, as in parterres, they are fitted in groups on beams (with PVC caps) fixed to the floor or self-stablisling.

In the telescopic stands the chairs are fitted on tip-up beams (fitted to the rear of the tread board) and disappear from view when the telescopic stand is closed.

The steel parts are normally painted black with epoxy powders: on request they can also be supplied in other colours or hot galvanised.

## SEDUTE ALL STARS PER TRIBUNE TELESCOPICHE

Grazie ad apposite travi di tipo ribaltabile che consentono di far scomparire le sedute nella struttura chiusa, le poltroncine "All Stars" possono essere montate anche nelle tribune telescopiche.

## NUMBERING - OPTIONAL

"All Stars" chairs can be numbered (optional) with Plexiglas plates fixed to either the underside of the seat or to the front or rear of the back, the number being silk-screen printed making it indelible. Plates identifying the row or sector are also possible.

## GUARANTEE CERTIFICATION

CETA "All Stars" have **Class 1 "Fire reaction" certification** (according to the positive outcome of C.S.E. tests RF 2/75/A and RF 3/ 77 as per Ministerial Decree 26.06.1984, ordinary supplement to Official Gazette n. 234 dated 25.08.1984). They also offered excellent results in weather and UVray tests, with more than 1000 hours subjected to the Xenotest, and to mechanical tests made by CATAS - Centre for Research and Development.
